For Immediate Release

Mistral brings Curtiss Wright's Video Distribution System to Indian Defense Market

Bangalore, September, 2008 – Mistral Solutions Pvt. Ltd., a leading provider of complete technology solutions and professional services in the embedded space, has announced the availability of VDS - the Video Distribution System from Curtiss Wright.

Ideal for ship-wide naval distribution systems, local situational awareness systems, airborne distribution systems and simulation systems, the VDS digital distribution systems provide all the elements required for high-performance video distribution over IP networks. These systems allow video from any source to be captured, compressed and distributed to any display or recording station over local or wide area networks.

VDS allows the transmission of multiple video streams by using JPEG2000 or MPEG compression techniques over standard GbE connections, providing the flexibility to distribute video to match quality and bandwidth requirements. JPEG2000 compression provides low latency advantages, making VDS ideal for time-critical applications.

Using the VDS, video streams can be multicast or unicast via UDP/RTP protocol standards that control the flow of video data to ensure optimized transmission over IP networks.

The VDS software suite provides a web or socket-based interface to allow simple configuration and set-up of a VDS system. A top-level API is also provided to allow a higher degree of customization if required.

About Curtiss-Wright Controls Embedded Computing
Curtiss-Wright Controls Embedded Computing is the industry's most comprehensive and experienced single source for embedded solutions, ranging from Processing, Subsystems, Data Communication, DSP, and Video & Graphics to the most advanced board level components and fully integrated custom systems. The Embedded Computing group serves the defense, aerospace, commercial and industrial markets and is part of Curtiss-Wright Controls Inc. For more information about Curtiss-Wright visit www.cwcembedded.com.

About Mistral Solutions
Established in 1997, Mistral is a premier product realization company providing end-to-end services for product design and development in the embedded space. Headquartered in Bangalore with regional offices in Delhi and Hyderabad, Mistral offers Systems Engineering and Value added Services that help customers build cost-effective, customized computing systems that excel in quality and accelerate time-to-market.

Mistral has forged successful partnerships with leading providers of embedded solutions, which has enabled us to provide our clients with the finest technology solutions based on the world's best platforms. Mistral's partners include among others Wind River Systems and Curtiss-Wright Controls (CWC) Embedded Computing Organization making available RTOS, IDE tools and commercial & rugged grade COTS computing solutions for commercial, military, aerospace, and avionics markets.
